

The
Fluid Life
Corporation

Quality Management System

This system is the action plan for the commitments made in our Fluid Life Quality Policy. This quality assurance initiative has been certified as meeting the latest ISO 9001:2000 standard by the QMI Management Systems Registration(Registration# 0009701). Certification covers laboratory services, sale of filtration products, sample bottles, and consulting services. Our quality program includes the following practices:

- Regular calibration checks on all equipment.
- Use of ASTM modified methods wherever possible.
- Human eye review of all sample data.
- Regular and random testing of standard samples.
- Statistically tracking results to determine whether the testing processes are stable under control.
- Continuously improving the control limits of all test processes.
- Participation in third party quality assurance programs including the International Quality Assurance Exchange Program.
- Ongoing staff training and development.
- ISO Standards and External Audits
