

## MAXIMUM FILTRATION TECHNOLOGY DESIGNED SPECIFICALLY FOR ENGINES FROM 500 HP TO 5000 HP

*Extend Your Engine Oil Drain Intervals Up To 8000 Hours \**

**99.3% Efficient Particulate  
Removal > 3 Microns**

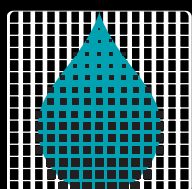

**99.1% Efficient Removal  
of Free and Dissolved Water**

## SPECIFICATIONS

- Filmmax's F-3000 filtration element was designed for large internal combustion engines, eliminating the need to utilize multiple vessels to achieve extended oil drain intervals. The F-3000 provides an immediate ROI for customers who are currently extending drain intervals from 4000 hours to 8000 hours, \*depending on their application.
- Efficiency – patented positive sealing system insures maximum filtration performance and structural integrity of the Filmmax F-3000 preventing any possibility of fluid by-pass.
- Surface Area – The Filmmax F-3000 provides an enormous amount of filtration media with over four (4) times the holding capacity of other partial flow and depth filters. With Filmmax's two (2) stack configuration this amounts to 3500 square feet of surface area required for large engine applications.
- Capacity – Filmmax F-3000 Series (2) two stack filtration element holds up to four (4) gallons of water and up to four (4) pounds of particulate contamination to provide absolute maximum filtration.

**REMOVES OXIDATION AND NITRATION BY-PRODUCTS**

# F-3000 SERIES FILTRATION ELEMENT HOUSING

## ***Filmox Ultra Fine Side Stream Filtration Technology for Stationary Engines***

- System capacity – 50 to 200 gallons
- Multiple vessels used for larger capacities
- Swing bolt design for easy element change
- Polyurethane Powder Baked Coating
- Pressure Rating – 125 PSI.
- Fluid Fill Capacity – 20 gallons
- Flow Rate – 5 gpm.
- Weight – 110 lbs.
- 3/4" NPT Inlet and Outlet Ports
- 3/4" NPT Drain Port
- 1/2" NPT Air Bleeder Port
- Element removal clearance – 21"
- 42" tall x 15.50" OD

***Short Term ROI – Extended Oil Drain Intervals***

***Long Term ROI – Extended Engine Overhauls***
