Attention

Please read this notice before sampling.

1. Do not remove prepaid sticker from the sample jar.
2. Always sample the oil while it is warm (i.e. while machine is running, or right after the machine has stopped).
3. Fill jar to the bottom of the threads, leaving 10mm of airspace. This will prevent leakage during transport and loss of sample.
4. Attempt to keep oil off the threads of the jar. Allow sample to cool and re-tighten the lid. Always ship samples in their black outer shipping jar to prevent accidental sample loss.

Following these guidelines will ensure samples arrive intact and uncontaminated, and will allow the accurate results.

...because what happens on the inside really counts.
