

WinRoast® Open Database Connectivity Driver (ODBC)

The Open Database Connectivity Driver (ODBC) is a standardized communication tool that is available as an option to your WinRoast® tool set. This add-on allows the use of other reporting and analysis tools such as Crystal Reports, Business Objects, Microsoft Access and Excel to analyze your WinRoast® data. With the ODBC add-on to WinRoast®, Fluid Life is opening fluid analysis and related information to a wider world.

The ODBC driver will allow you to cross-correlate your WinRoast® data with information from a number of other sources or systems (maintenance records, interval data, online vehicle telemetry, and vibration analysis) to provide an accurate overall picture for business intelligence. With the ODBC driver you will have the ability to pull your fluid analysis and related data and merge it with information collected from other sources into tools such as Crystal Reports, BI, Excel & Access.

Benefits of the ODBC Driver

The ODBC driver enables you to utilize your WinRoast® data from any ODBC compliant access tool.

Open Database Connectivity (ODBC) provides a standard software interface for access to database management systems (DBMS). ODBC is designed to be independent of programming languages, database systems, and operating systems. Therefore, any application can use ODBC to query data from a database.

ODBC can be used to access a number of different databases and text from tools like Crystal Reports, Business Objects, Excel and Access. ODBC allows data stored in personal computers and various databases to be accessed in a neutral way.

The newly added ODBC driver provides:

- Read-only access to WinRoast® data from compliant ODBC reporting tools.
- Cross-correlation and integration of data from WinRoast® data sources.
- Simplified data capture and trending of information.
- Export of data and updates in real time.

System Requirements

- WinRoast® license
- Pentium processor or faster
- Windows XP, Vista or newer
- 1 Gb Ram
- 500 Mb Free Hard Disk Space
- Internet connection
